

# GROUNDFIX 2V RAFTERS RAMMED

## Vlastnosti:

- Placement of panels on the structure – 2 panels vertically.
- Construction for standard FVE panel tilt range 10°–30°
- The structure is height adjustable and can level uneven terrain
- The rafter construction allows the use of different panel sizes
- Easy and quick installation, the possibility of leveling the structure
- All construction elements hot-dip galvanized according to DIN EN ISO 1461
- The construction is according to ČSN EN 1990
- Weight of 1 MW approx. 26 t
- Made in Czech Republic

**1.** Hammered piles C profile – adjustable height of stands

**2.** Fastening panels to longitudinal profiles

**3.** The solution for adjusting the slope of the rafters and optimal placement of the struts

**GROUNDFIX** is a European company based in Prague. Our company focuses on providing foundation solutions for every type of soil conditions. From standard soil, with easy installation, through low density, muddy terrain where a special type of propeller screw is necessary, to hard rocky terrain where predrilling technology is required. As well as ground screws we are able to provide rammed post foundations if clients prefer this technology and the soil conditions allow it. The unique ground screw technology offers many advantages. Installation is very fast even in the case of complicated terrain and soil conditions, there are no harmful effects on the environment and it is all re-useable.

Engineering:

- Specific locations are taken into account during the proposition and preparation phase.
- The project is assessed for optimization and the client's maximum profitability.
- Static engineering calculations are made as a part of the overall solution.
- In cooperation with investors, we respect the preferences of our customers, and give them recommendations for the optimal use for the particular site.
